

SmartMeters

How to programme the meter

1. Power up the meter
2. Wake up the gas sender by putting a magnet on the side of the sender it should then start flashing red, this means it is ready to be paired
3. On the Meter hold down 'A' until it displays 'Code 000000' and underneath 'Bind Sender' then use the 'A' button to scroll through the numbers and the 'B' button to increase the numbers. You will then need to enter the code 205226, then scroll to the '*' at the end of the numbers and just underneath this should say 'Bind Sender' then you will need to press the 'A' button once more and the gas sender should then pair to the meter, you will know this as happened as on the screen of the meter it will say 'Binding Successful'
4. If you are needing to enter a gas or water reading, you will need to repeat the previous step once more HOWEVER once you get onto the '*' you will need to press the 'B' button until it says 'opening read', then you can press 'A' and enter the desired reading.
5. Your meter should now be fully set up.
